snagurum@snagurum-VirtualBox:~$ docker run hello-world

Hello from Docker!
This message shows that your installation appears to be working correctly.

To generate this message, Docker took the following steps:
1. The Docker client contacted the Docker daemon.
2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
   (amd64)
3. The Docker daemon created a new container from that image which runs the
   executable that produces the output you are currently reading.
4. The Docker daemon streamed that output to the Docker client, which sent it
   to your terminal.

To try something more ambitious, you can run an Ubuntu container with:
$ docker run -it ubuntu bash

Share images, automate workflows, and more with a free Docker ID:
https://hub.docker.com/

For more examples and ideas, visit:
https://docs.docker.com/get-started/

Status: Downloaded newer image for mongo:4.4.8
docker.io/library/mongo:4.4.8

snagurum@snagurum-VirtualBox:~$ docker image ls
REPOSITORY    TAG       IMAGE ID       CREATED        SIZE
mongo         4.4.8     3d97b76ddd76   3 weeks ago   437MB
hello-world   latest    d1165f221234   5 months ago   13.3kB

snagurum@snagurum-VirtualBox:~$ docker run -d --name first-mongo -p 27017:27017 --link /mongodata:/data/db mongo:4.4.8
```

The terminal window is part of an Ubuntu desktop environment, with the title bar indicating it is running in Oracle VM VirtualBox. The desktop background is a dark red/orange color. The terminal window has a dark background with light-colored text. The output shows the successful pull of the mongo:4.4.8 image and the execution of the docker image ls command, which lists the pulled image and other available images. Finally, the docker run command is executed to start the first-mongo container.

---
The server generated these startup warnings when booting:
  2021-08-28T18:20:24.861+00:00: Using the XFS filesystem is strongly recommended with the WiredTiger storage engine. See http://dochub.mongodb.org/core/prodnotes-filesystem
  2021-08-28T18:20:25.080+00:00: Access control is not enabled for the database. Read and write access to data and configuration is unrestricted
---
  Enable MongoDB's free cloud-based monitoring service, which will then receive and display
  metrics about your deployment (disk utilization, CPU, operation statistics, etc).

  The monitoring data will be available on a MongoDB website with a unique URL accessible to you
  and anyone you share the URL with. MongoDB may use this information to make product
  improvements and to suggest MongoDB products and deployment options to you.

  To enable free monitoring, run the following command: db.enableFreeMonitoring()
  To permanently disable this reminder, run the following command: db.disableFreeMonitoring()

Testing the backend-service ppblService

The image is a composite of two screenshots. The top screenshot shows a terminal window with a dark purple background. The prompt is 'snagurum@snagurum-VirtualBox: ~/pplw/ppbl'. The user has run 'cd pplw/', 'cd ppbl', and 'ls'. The 'ls' command output lists: 'angular.json', 'package.json', 'src', 'tsconfig.spec.json', 'Dockerfile', 'package-lock.json', 'tsconfig.app.json', 'karma.conf.js', 'README.md', 'tsconfig.json'. The bottom screenshot shows the Visual Studio Code interface with a dark theme. The title bar reads 'Dockerfile - ppbl - Visual Studio Code'. The Explorer sidebar on the left shows a file tree for 'ppbl' with files like 'Dockerfile', 'karma.conf.js', 'package-lock.json', 'package.json', 'README.md', 'tsconfig.app.json', 'tsconfig.json', and 'tsconfig.spec.json'. The 'Dockerfile' is selected and its content is shown in the main editor. The Dockerfile content is as follows:

```
1 FROM node:12-alpine as build-step
2 WORKDIR /app
3 COPY package.json /app
4 RUN npm install
5 COPY . /app
6 RUN npm run build
7 # used for debugging build resource in node.
8 #RUN file="$(ls -l /app)" && echo $file
9 #RUN file="$(ls -l /app/dist)" && echo $file
10 #RUN file="$(ls -l /app/dist/ppbl)" && echo $file
11
12
13 #step 2
14 FROM nginx:1.17.1-alpine
15
16 #used for debugging
17 #RUN cat /etc/nginx/conf.d/default.conf
18 RUN rm /etc/nginx/conf.d/* .conf
19 COPY nginx.conf /etc/nginx/conf.d
20 COPY --from=build-step /app/dist/ppbl /etc/nginx/html
21
22
```

```
